PASTURE, RANGELAND, & FORAGE (PRF)

Pasture, Rangeland, & Forage (PRF) is an area-based plan of insurance that uses a Rainfall Index to determine losses and trigger indemnities. The program addresses forage-based production systems on land areas producing primarily perennial vegetation comprised of diverse plant communities and mixtures.

- Perennial and annual
- Warm season and cool season
- Different growth habits over extended time periods

Because of the nature of forage-based systems, the purpose of the program is to insure annual forage production.

Forage may be harvested directly by grazing animals, harvested for hay, or a combination of both.

Grazingland

1. Established acreage of perennial forage
2. Intended for grazing by livestock
3. Acreage must be suitable for grazing

Hayland

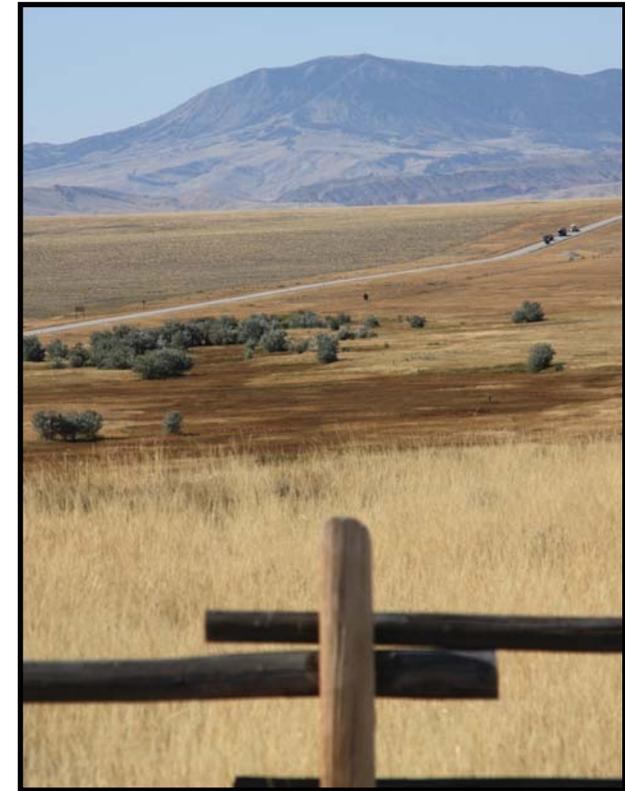

1. Established acreage of perennial forage
2. Intended for haying
3. Acreage must be suitable for haying

Pasture, Rangeland, & Forage (PRF) Program	Rainfall Index (PRF-RI)
Sales Closing Date Cancellation Date Termination Date	November 15 preceding the crop year
Acreage Reporting Date	November 15 preceding the crop year
Number of Index Intervals per year	11
Duration of Each	2 months
Entire Insurance Period	January 1 -- December 31
Administrative Fee	\$30 per county

Rainfall Index (PRF-RI)

Based on NOAA data with coverage provided for a single peril, lack of precipitation.

Precipitation is highly correlated with forage production, but does not directly predict actual forage production.

Buying a crop insurance policy is only one risk management option.

Producers should always carefully consider how a policy will work in conjunction with their other risk management strategies to ensure the best possible outcome each crop year.

Your Farm Bureau® crop insurance agent can assist you in developing a good management plan for your farming operation.

The crop insurance experts you can rely on!
